\* Adobe Photoshop CS4 Learning Suite provides easy access to comprehensive tutorials, step-by-step articles, and how-to tips that cover using Photoshop, Adobe After Effects, and Adobe Illustrator. You can get this great suite of tutorials at [www.tutoringsoft.com/photoshop/](http://www.tutoringsoft.com/photoshop/) or the Adobe CS4 (Mac OS X) DVD. Creating a Clipped Mask in the following steps, you use the Pen tool to create a path in the shape of a character's mouth. Then you use clipping masking to create a transparent mask that you can apply to layers containing the character's image to reveal the shape of the mouth. 1. Start a new image. Set the image type to RGB (or CMYK, if necessary) and the color mode to CMYK. You need to save the image as a layered file to create the path you use to mask the mouth. The steps in the following steps assume that you've saved the file as a layered PSD file. The steps in this tutorial are based on Photoshop CS4. However, Photoshop CS3 and older versions do not support path-based masks. 2. Create a new layer and then name it Layers 1. Create a new layer and name it Background. 3. Create a new layer and then name it Layers 2. Make sure the background layer is visible and that it's active (it will be in the foreground and in front of any layer you create in the following steps). 4. Use the Pen tool and the path shown in Figure 4-4 to draw a path. 5. Choose Path>New Path>Create a Closed Path from the main menu or by pressing Ctrl+B. 6. Adjust the path to be slightly smaller than the mouth in Figure 4-4. Make the path a rectangular path with no nodes. 7. Save the file as a psd file. You should end up with a file that looks like Figure 4-5. \*\*Figure 4-4:\*\* Draw a path in the shape of the mouth. \*\*Figure 4-5:\*\* The final path for the character. 8. Select the Pen tool (T) from the tools panel and use the Pen tool to click the path to create a single point. You should see the Arrow cursor with a solid red segment and a dotted blue segment.

Successful treatment of persistent toothache with intravenous methotrexate. Tooth pain is a common complaint and can be associated with a variety of underlying pathologies. When the cause of the pain is refractory to conservative care, and there is a clear medical indication, a short course of intravenous methotrexate at a dose of 15 mg/m<sup>2</sup> is a useful option in the management of severe chronic toothache. This technique may be used as first-line therapy, or second- or third-line in patients who have failed to respond to conservative measures. Methotrexate is increasingly used off-label for systemic or local pain relief in patients where the use of conventional analgesics is limited by side effects. Oral administration is not possible due to methotrexate's poor gastrointestinal absorption. We present a case of a young woman with Crohn's disease who, following repeated dental visits, complained of severe toothache despite being treated with a range of analgesia. Intravenous methotrexate (15 mg/m<sup>2</sup>) was introduced as an effective and safe treatment. METAIRIE (CBSDFW.COM) - A North Texas homeowner is thankful a stray bullet didn't hit his home as he and his kids were cleaning up after a holiday party this week, but now he's concerned. He said a neighbor's home just a few doors down was hit by bullets and his house was hit by two. "Everything was good. I was just having my family have a good time and enjoy the day. My kids were just having fun. We were doing things," Bryan said. "It was a fun day and everything was kind of keeping it light." That all changed quickly when Bryan says two shots were fired into his home from a speeding vehicle. His family sheltered in place with no injuries and he says he's thankful that's where it ended. "This was a house we're glad we're here so we can come home and do this every day," he said. "You shouldn't have to worry about your life or your kids' life or anyone you know." A bullet went through the front door and struck a second door. "It's a brick house. It's not a wooden house. I don't
